

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A method for transmitting information between a transmitting terminal and a receiving terminal via the Internet, wherein at least one of the transmitting terminal and the receiving terminal is a mobile tool, comprising the steps of:

storing in a server on said Internet a plurality of data constituting parts of a sending data to be transmitted from said transmitting terminal to said receiving terminal;

selecting one or more from said stored data by means of operating said transmitting terminal;

authoring said sending data on a display unit of said transmitting terminal by using said selected data ~~which is not downloaded thereto~~;

storing said sending data in said Internet server;

performing access to said Internet server to receive said sending data from said receiving terminal;

distributing said sending data stored in said Internet server to said receiving terminal; and

displaying said sending data distributed on a display unit of said receiving terminal.

2. (previously presented) A method for transmitting information according to claim 1, wherein:

said data stored in said Internet server is a character data or an image data.

3. (previously presented) A method for transmitting information, according to claim 2, wherein:

said image data is data of each part of a face.

4. (previously presented) A method for transmitting information, according to claim 1, wherein:

said step of distributing said sending data stored in said Internet server to said receiving terminal is conducted by distributing an address having access to said sending data stored in said Internet server, and said step of displaying said sending data distributed on a display unit of said receiving terminal is conducted by accessing said address.

5. (previously presented) A method for transmitting information, according to claim 1, wherein:

said transmission of said information is conducted using a mobile tool as said transmitting terminal and said receiving terminal.

6. (previously presented) A method for transmitting information, according to claim 5, wherein:

said step of transmitting information includes that, in case that said mobile tool used as said receiving terminal does not display said sending data on its display unit, a telephone message to urge displaying of said data on said display unit is transmitted from said mobile tool as said transmitting terminal via a telephone line to said mobile tool as said receiving terminal.

7. (previously presented) A method for transmitting information, according to claim 1, wherein:

said step of displaying said sending data on said display unit of said receiving terminal includes a step to draw a replying data by calling said data from said Internet server and modifying a part of said sending data.

8. (currently amended) A method for transmitting information between a transmitting terminal and a receiving terminal via the Internet, at least one of the transmitting terminal and the receiving terminal being a mobile tool, comprising:

storing data at an Internet server;

selecting a portion of the stored data using the transmitting terminal;

authoring the selected portion on a display unit of the transmitting terminal to form sending data, ~~the selected portion not downloaded to the transmitting terminal;~~

storing the formed sending data at the Internet server;

accessing the Internet server from the receiving terminal;

transmitting the stored sending data to the receiving terminal based on the accessing of the Internet server from the receiving terminal; and

displaying the transmitted sending data on a display unit of the receiving terminal.

9. (previously presented) The method of claim 8, wherein the data stored at the Internet server is one of character data and image data.

10. (previously presented) The method of claim 8, wherein the data stored at the Internet server includes image data of each part of a face.

11. (previously presented) The method of claim 8 wherein:
transmitting the stored sending data to the receiving terminal includes transmitting an address having access to the stored formed sending data at the Internet server; and

displaying the transmitted sending data on a display unit of the receiving terminal includes accessing the address by the receiving terminal.

12. (previously presented) The method of claim 8, wherein each of the transmitting terminal and the receiving terminal is a mobile tool.

13. (previously presented) The method of claim 8, further comprising:
transmitting a telephone message to urge displaying of the sending data on the display unit of the receiving terminal.

14. (previously presented) The method of claim 8, wherein the selected portion of the stored data is a first selected portion, and further comprising:

selecting a second portion of the stored data using the receiving terminal;

and

modifying the displayed sending data on the display unit of the receiving terminal with the selected second portion of the stored data to form reply data.
